

Wedding Memory Garden

Concept

A living digital garden that grows throughout the wedding.

Every guest plants **one flower** in the couple's garden.

Each flower contains:

- One photo
- One blessing/message
- Guest name
- Bride Side or Groom Side badge

The garden starts almost empty and gradually blooms as guests contribute.

Story

Instead of saying:

"Upload a photo"

The copy can be:

Plant a Memory in Our Garden

Every flower represents a guest, a memory, and a blessing shared on our wedding journey.

Visual Concept

The page opens to a beautiful illustrated garden matching the wedding branding.

Think:

Floral meadow

 Butterflies

 Leaves

 Subtle floating particles

 Wedding color palette

Initially only a few flowers are visible.

As guests upload, new flowers appear across the landscape.

User Flow

Step 1

Guest enters Memory Garden.

They see:

Plant Your Flower

Leave one photo and one message for the couple.

[Plant My Flower]

Step 2

Upload Form

Name

(pre-filled from guest profile)

Side

(pre-filled Bride Side or Groom Side)

Photo Upload

(1 image only)

Message

(Optional)

Maximum 150-200 characters.

Step 3

Plant Animation

After submitting:

 Seed falls into soil

 Sparkles

 Flower blooms

"Your flower has been added to the garden."

This moment should feel rewarding.

Flower Design System

Different flower styles can represent different guest types.

Bride Side

Pink / Peach Flowers

 Peonies

 Tulips

 Roses

Groom Side

Blue / Lavender Flowers

 Lavender

 Wildflowers

 Hydrangeas

Immediately creates visual balance between both families.

Garden Layout

Not a grid.

A natural landscape.

Flowers appear organically.

Like:

Guests can drag around the garden and explore.

Interaction

When a flower is clicked:

The flower opens into a beautiful card.

Expanded Card

 Guest Photo

 Guest Name

💖 Bride Side / Groom Side

💌 Message

Example:

"May your life together be filled with endless laughter and adventures."

– Priya

Progressive Growth

This is where it gets exciting.

0–25 Guests

Small Garden

25–75 Guests

More flowers appear

Butterflies start appearing

75–150 Guests

Flower density increases

Additional pathways appear

150+ Guests

Garden becomes lush and blooming

Floating petals

Special decorative elements unlock

The garden visually celebrates participation.

Community Goal

At top:

Garden Progress

167 / 250 Flowers Planted

This encourages guests to contribute.

People love seeing progress bars.

Hidden Surprise

When the garden reaches:

100 flowers

A special flower blooms.

Clicking it reveals:

A hidden note from the couple.

At 200 flowers:

Couple's favorite photo unlocks.

At 300 flowers:

Wedding video teaser unlocks.

Memory Garden Keepsake

After the wedding:

The garden becomes permanent, the link to view this is shared with the couple.

1 Year later, the couple is mailed/shared as a reminder on their anniversary:

- Every flower
- Every blessing
- Every guest photo

Instead of scrolling through a gallery, they explore a garden built by their family and friends in this beautiful digital album.

Simple Technical Structure

Each flower stores:

- Guest ID
- Guest Name
- Bride/Groom Side
- Photo
- Message
- Timestamp

One record per guest.

If they submit again:

"You have already planted your flower 🌸"

Since the guest is already identified through the wedding website login, no OTP or extra verification is needed.

My favorite little detail

As guests submit, a tiny illustrated signboard at the entrance updates:

 **"247 Flowers Blooming"**

It makes the entire feature feel less like a guestbook and more like a collaborative piece of wedding art that grows throughout the celebration.
